

Workshop

Friday 13 October / 11.00 - 13.00

Sala 4

S8-SGTB: Its fundamental mechanisms, therapeutic procedures and clinical efficacy *Shen Gang*

Based on the prior lecture, this forum gives the in-depth details and specifics on clinical implementation of S8, including the new diagnostic classification system and its relevance to the S8 indications, working bite wax recording and registration, phasic goal determining and designing, the teeth movement and curve of Spee flattening incorporated into phase one, the transition from phase one to phase two, inspection and amendment of simulated animations, radiographic film taking and evidence examination of TMJ remodeling, criteria for case completion, and patient recall for long term follow up. Adequate proportion of time is given to an instructive demonstration and hands-on practice on working bite registration, including the three dimensional requirement for mandibular repositioning in different scenarios, the placement of wax and precise mandibular relocation.
